The one-year MS from Columbia University offers a great gap year option for future health professionals to fill a big healthcare gap. Since nutrition contributes to more than half of the 10 leading causes of death in the US and worldwide, and except for programs that train nutritionists, health professionals do not receive training in nutrition. This program is designed to fill that gap and train all health professionals about the importance of nutrition in disease prevention and treatment.

**Key features the IHN MSc program offers:**

- Outstanding academic and professional development that reinforce all 15 AAMC competencies for Entering Medical Students.
- Rigorous curriculum including thesis project.
- Training in basic science, clinical nutrition and public health nutrition.
- Community projects and research opportunities in New York City.
- Small class size and world class faculty.
- Access to leaders in the field of nutrition.
- Clinical observation of a range of health professionals.
- Seminars in Narrative Medicine and Inter-Professional Education
