Yale School of Medicine Postgraduate Research Associate

Paid, full-time position, starting May/June 2018

This is a one or two-year position to work on neurocognitive research studies in the Department of Psychiatry and assist with clinical intakes in the Yale OCD Research Clinic. Responsibilities include conducting semi-structured diagnostic interviews with potential participants, administering computerized behavioral assessments, and overseeing MRI scans. The position also involves data entry and analysis.

Training in clinical assessment and research methodology will be provided. This position requires a Bachelor’s or Master’s degree, good interpersonal and organizational skills, and a strong work ethic. An ideal candidate will have prior clinical research experience. Strong computational skills and programming knowledge would also be advantageous; opportunities to learn about clinical neuroimaging acquisition and analysis may be provided.

This is an ideal position for someone who recently graduated from college and will be applying for medical or graduate school. A two-year commitment is preferred.

If interested please send a letter of interest and curriculum vitae or resume (including 2 references) to Dr. Patricia Gruner: patricia.gruner@yale.edu.
