Sports Medicine and Orthopedics: Clinical Research Opportunity at Hospital for Special Surgery (New York, NY)

Consider a paid position that involves constant interaction with attending orthopedic surgeons and research fellows at the top-ranked hospital for orthopedics in the United States. The Healthcare Research Institute is interested in hiring a motivated pre-med. The full-time position entails coordinating and executing various studies on topics including anterior cruciate ligament (ACL) reconstruction and injury prevention, shoulder surgeries, and sports medicine. Additionally this position includes assisting Dr. Marx in his office seeing patients together where one learns about clinical decision making and electronic health records. Our department focuses on studying patient outcomes and related epidemiology in the field of musculoskeletal medicine.

Responsibilities include:

- Patient screening and recruitment into clinical trials
- Creating and analyzing data collection instruments
- Patient follow-up
- Coordination with primary sites for multi-center studies
- Manuscript editing and preparation
- Writing and updating IRB protocols
- Assisting in the preparation of research presentations
- Assist with editorial work for a major orthopedic journal
- Assist in office with patient care

Specific duties vary a great deal depending on the research at hand and the current needs of the doctors involved. The qualified applicant will have a Bachelor's Degree in arts or science (BA or BS), but most importantly, a strong interest in medicine and obtaining invaluable experience in clinical research. A minimum 12-month, full-time commitment is required. Compensation includes benefits and a competitive salary.

Interested applicants should email a cover letter (addressed to Dr. Marx and Dr. Lyman), resume and transcript by February 9, 2019 to Caroline Boyle (boylec@hss.edu).
