Postgraduate Associate Posting:

The HPV Vaccine Working Group at Yale School of Public Health is recruiting a research associate to join our group for a two-year position. Our investigators are interested in the real-world effectiveness and implementation of the HPV vaccine.

Primary roles of research associates will include:

1. Recruiting potential study participants by phone and mail and recording recruitment process in databases
2. Collecting data from study participants using a standard set of questions, recording data into existing Excel databases.
3. Identifying eligible study participants and communicating with clinical teams
4. Assisting with conducting and analyzing qualitative research studies
5. Assisting with preparation of abstracts, presentations and manuscripts of relevant
6. Reporting on the status of research activities at bi-weekly team meetings with the principal investigators.
7. Assist research coordinator and other researchers will administrative tasks as needed.

Research associates will have exposure to the clinical environment by working with the electronic medical record and with nurses and clinicians. You are welcome and encouraged to attend department conferences, lectures, and rounds at Yale School of Public Health and in the Departments of Pediatrics and Obstetrics, Gynecology, & Reproductive Sciences at Yale School of Medicine. Our program has a record of providing associates with opportunities for abstract presentation and manuscript authorship as well as preparation for medical school or public health service. The ideal candidates should be highly motivated, have a strong academic record, an interest in vaccines, HPV disease and prevention, and skills in databases and analyses.

Applications will be reviewed on a first come, first serve basis and strong candidates will be invited to interview. Please contact Erin Sullivan (erin.reutenauer@yale.edu) to apply or with questions.
